

Time tracking that doesn't **complicate**, it **clarifies**.

Timeminator is a **self-hosted, project-based time tracker** built for SMBs that track resources internally. No invoicing bloat, no SaaS lock-in: **live timer, custom categories, budget-vs-actual analytics, and team sentiment tracking** — all audit-ready, all on your own server.

DEPLOYMENT

PHP 8.1+ · MySQL / SQLite

AUDITABLE

Full booking history · Immutable imports

NO DEPENDENCIES

Zero-setup SQLite or standard hosting

PRIVACY

Self-hosted · GDPR-compliant · No SaaS

CORE CAPABILITIES

TIME TRACKING

Live timer + manual booking

Flexible input methods: start/stop timer for real-time tracking or manually log hours.
Custom categories (Client Project, Research, Internal) let teams allocate time exactly how they work.

BUDGET ANALYTICS

Three curves per project

Budget vs. Time vs. Resources: overlay your plan against actuals in one view. **Pro-employee breakdowns** show time allocation across project types, catching imbalance early.

TEAM PULSE

Sentiment + workload signals

Monthly **sentiment ratings** (personal & project-level) combined with workload data surface burnout risk, staffing gaps, and customer satisfaction in one loop.

WHY TIMEMINATOR, NOT SAAS

- **No bloat.** Invoicing, expense reports, mileage tracking—removed. You get time tracking, budget analytics, and team sentiment. That is it.
 - **Custom categories.** Define your own project types (Kunde / Forschung / Intern). Most SaaS force generic "projects" + "tags."
 - **Budget insights.** Three-curve view (Budget / Time / Resources) is unique to Timeminator. Toggl and Clockify have zero budget integration.
- **Self-hosted.** Run locally on SQLite (zero infrastructure) or on your own MySQL server. No vendor lock-in, no SaaS bills, full GDPR control.
 - **Sentiment tracking.** Combine workload data with team mood. No other time tracker does this out of the box.
 - **Audit-ready by design.** Immutable booking history, versioned imports, role-based permissions. Built for teams that need proof.

HEAD-TO-HEAD: TIMEMINATOR VS. MARKET

FEATURE	TIMEMINATOR	CLOCKIFY	FLOAT	TOGGL
Time Tracking	✓	✓	✗	✓
Custom Categories (3+ types)	✓	✗	✓	✗
Budget vs. Actual	✓	✗	✓	✗
3 Curves (Budget/Time/Resources)	✓	✗	∅ (2)	✗
Sentiment Tracking	✓	✗	✗	✗
Self-Hosted / On-Premise	✓	✗	✗	✗
Pricing (SMB)	1x fee	\$10–15/u	~\$150/mo	\$10/u
Zero Setup (SQLite)	✓	✗	✗	✗

Agencies

Project-based resource allocation

R&D Teams

Track client vs. research split

Consulting

Budget-ready actuals for steering

Startups

No SaaS lock-in, full data control

GETTING STARTED

- 01 Web installer** — set up in 2 minutes, no CLI.
- 02 Create projects & team** — define your categories, add users.
- 03 Start tracking** — timer, manual logs, and reports are live instantly.
